

## SDG 15.4. : Land sensitive waste disposal

### 15.4.3. Policy on hazardous waste disposal

Description:

Handling of toxic waste in the Vocational Education Program is handled separately by classifying and collecting toxic waste into special trash bins labeled B3 Waste. The toxic waste produced by the Vocational Education Program is very minimal both in quantity and type, such as lights, batteries, and electrical cables. After the waste is grouped separately from other waste, the toxic waste is transported by a car provided by UI for further processing at the UI Waste Reservoir.
